1.MongoDB Atlas Setup

Step 1: Open MongoDB Atlas Website

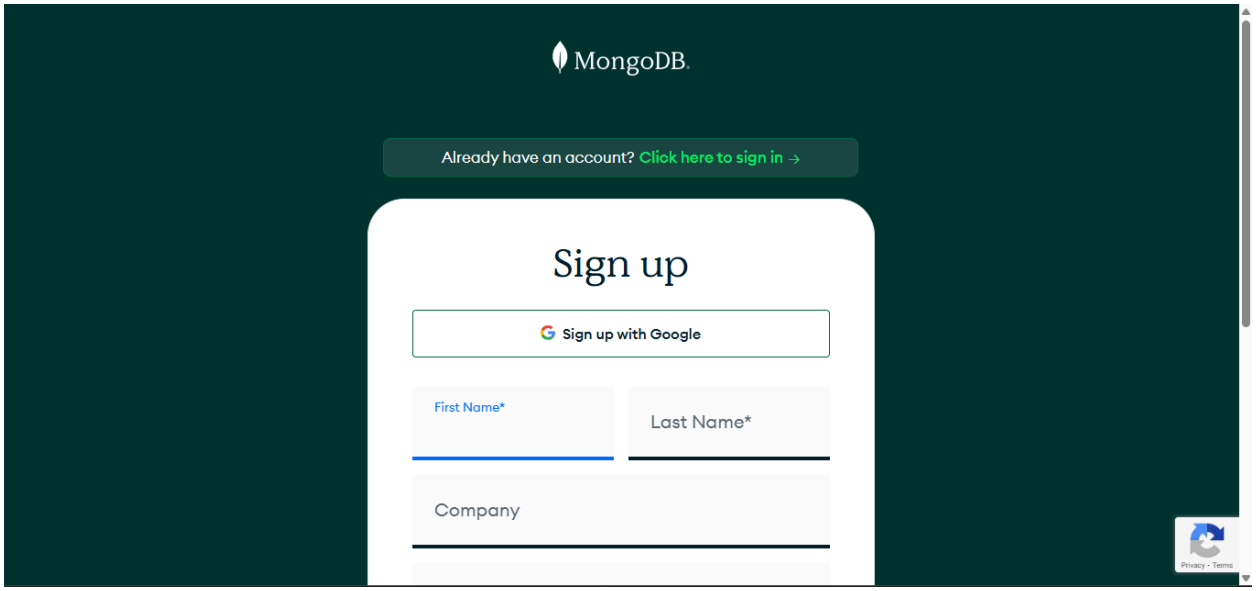
1. Open your browser
2. Go to: 👉 https://www.mongodb.com/atlas
3. Click **Try Free**

Step 2: Sign Up

You can create an account using:

- Google account
- GitHub account
- Email & password

Recommended: **Sign up using Google**

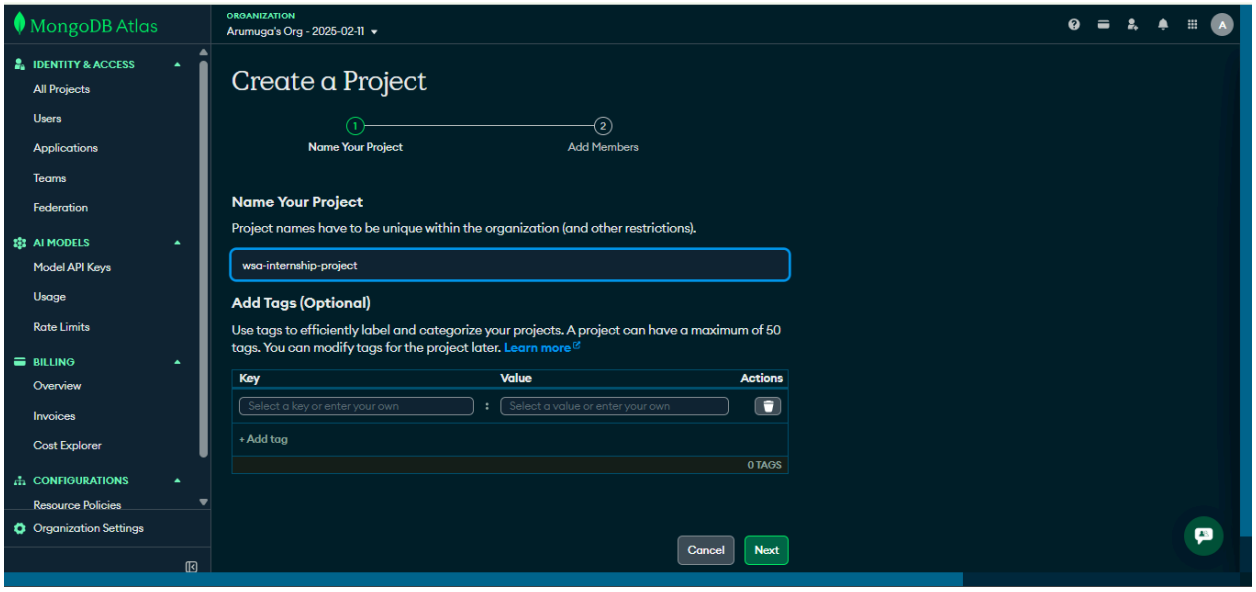


Step 3: Create a New Project

Enter Project Name

Example: wsa-internship-project

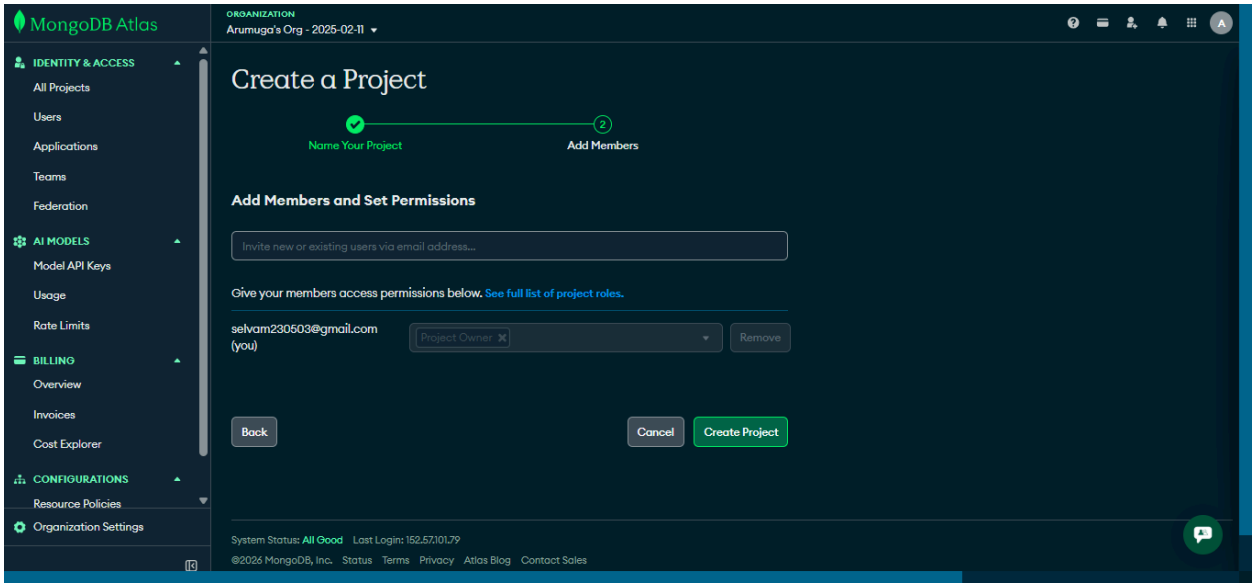
Then click:👉 **Next**



Step 4 : Add Members (Optional)

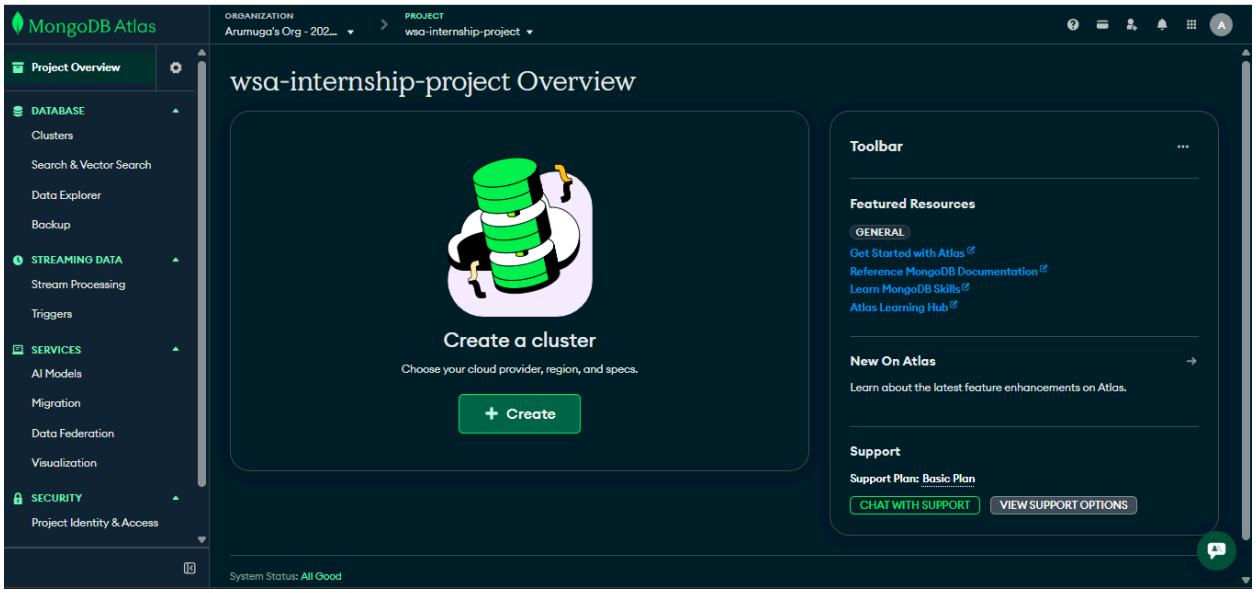
You will see an option to **add team members**. For now:👉 Click **Create Project**

You can skip adding members.



Project Created

Once the project is created, you will be redirected to the **Project Dashboard**.
Now you can proceed to:👉 **Create a Cluster**



Step 5 : Create a Cluster (Database Server)

Select:👉 **Shared (FREE)**

This is the **M0 free cluster** suitable for learning and small projects.

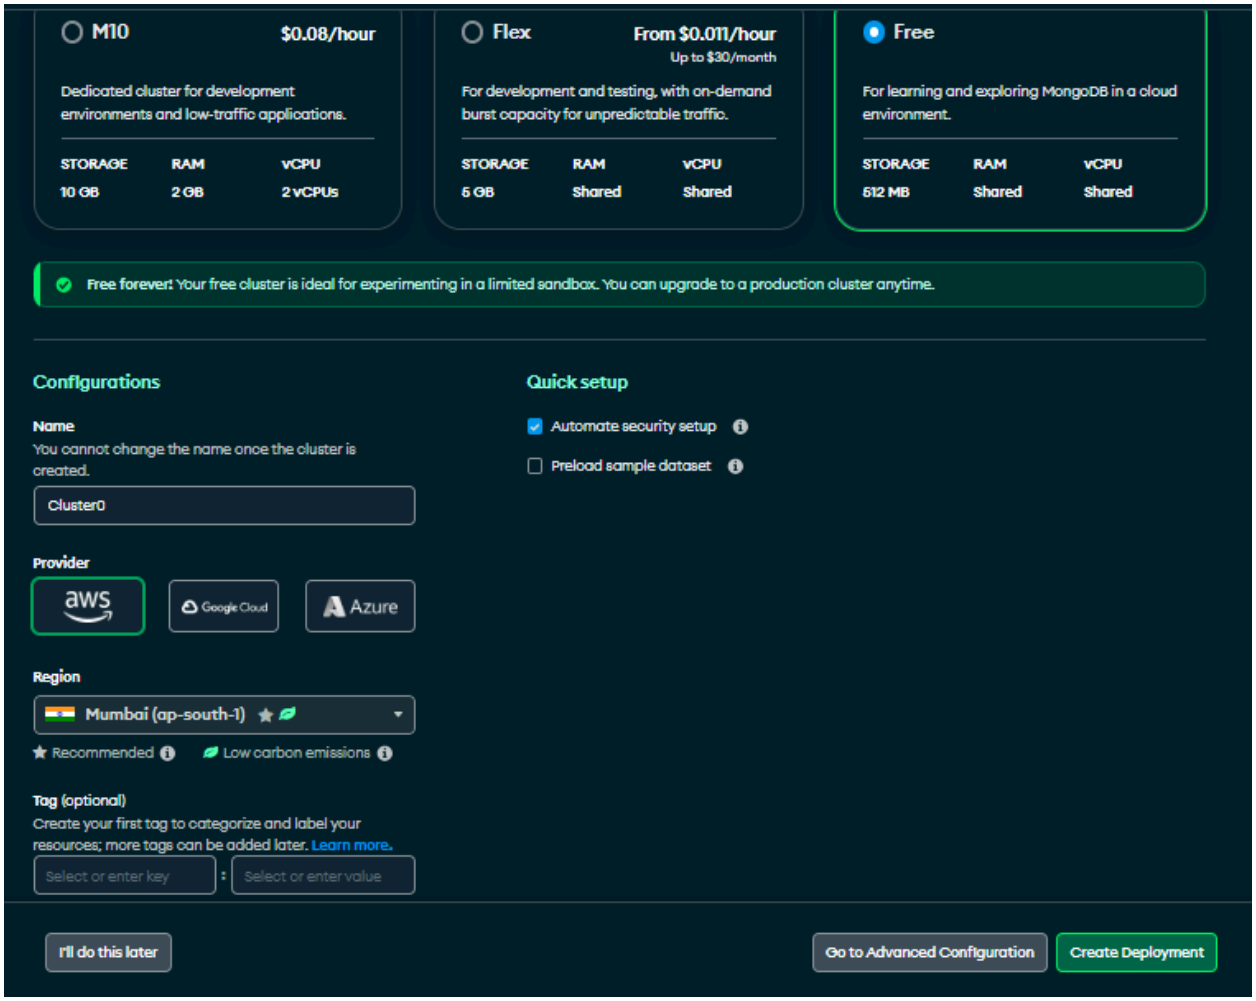
Click **Create**

Cluster Name: Cluster0

Cloud Provider: AWS

Region: Choose the closest region (example: Mumbai)

Then click: 👉 **Create Deployment**

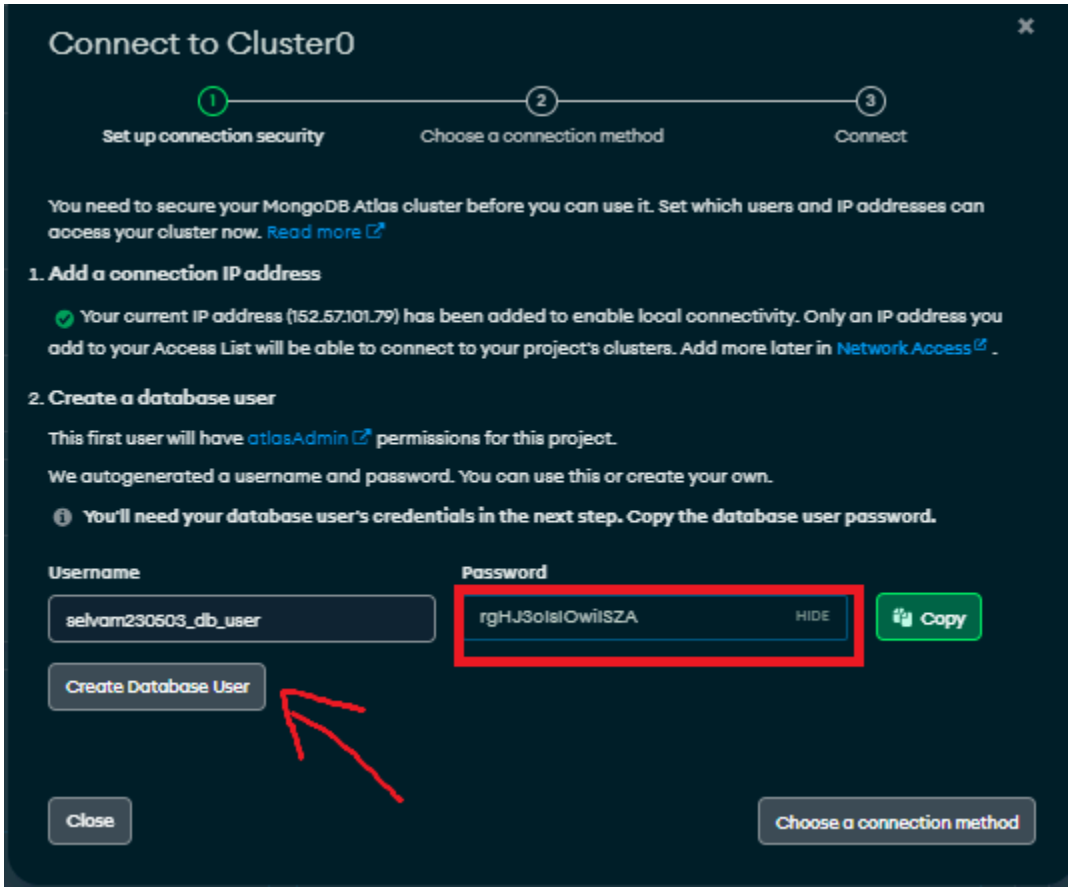


Step 6 :Create Database User

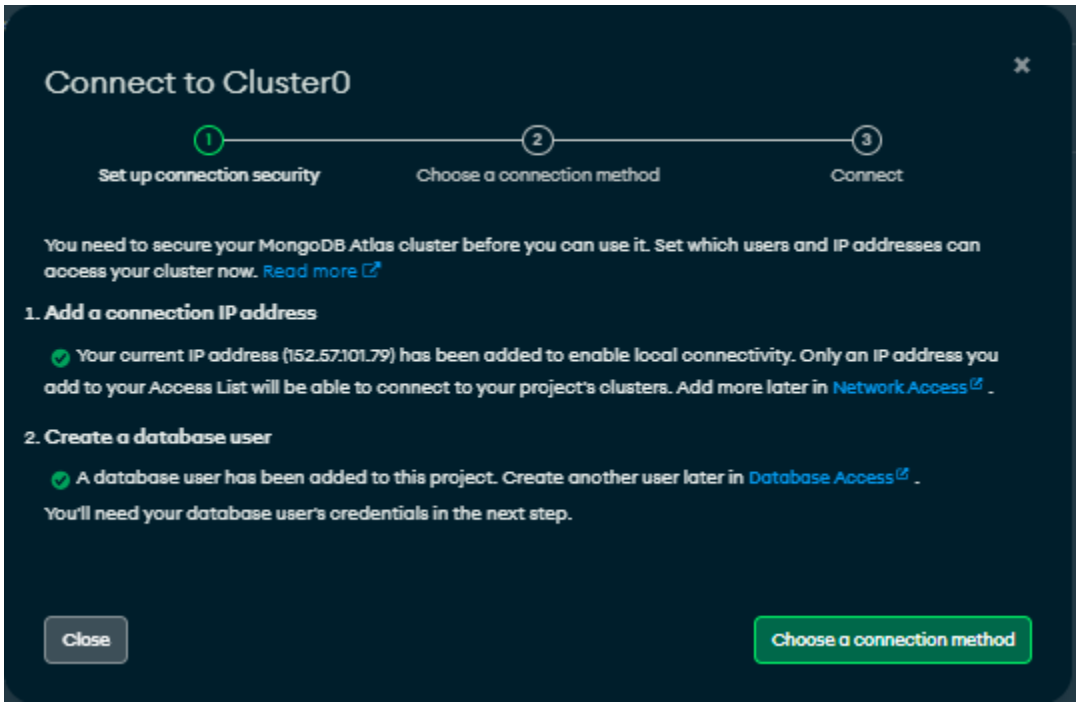
Click the create Database User in the Popped up window.

(Note : If the popped window is not opened Move to Step No : 9 Click here)

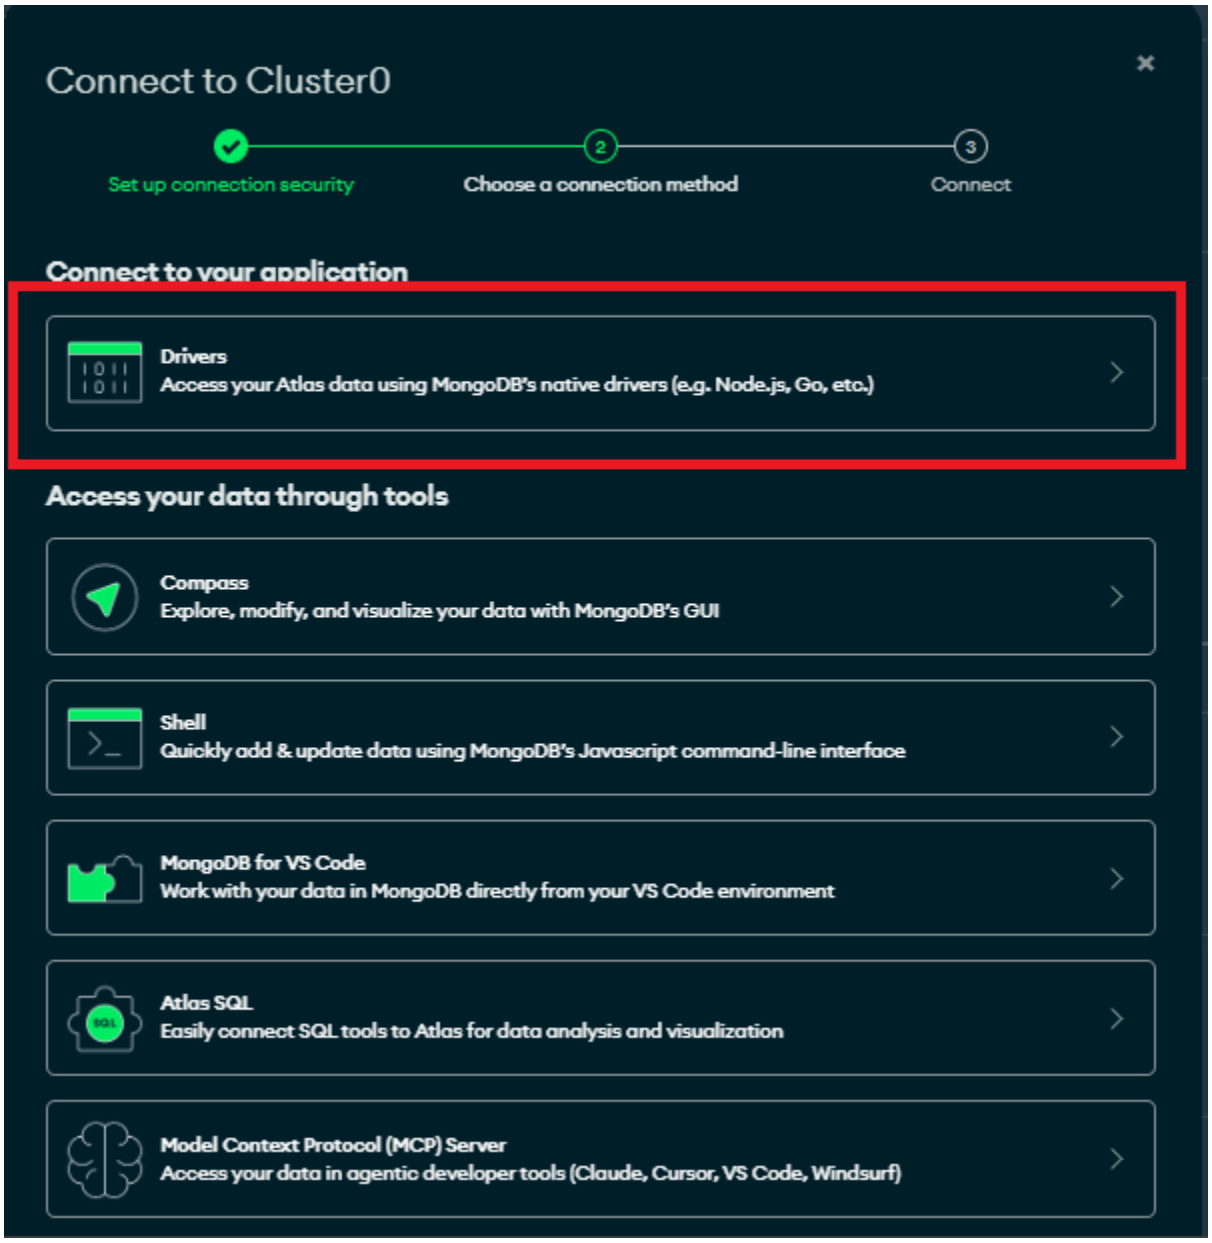
(Note : Before creating it, copy the password and save it somewhere.)



Step 7 : Choose a connection method.

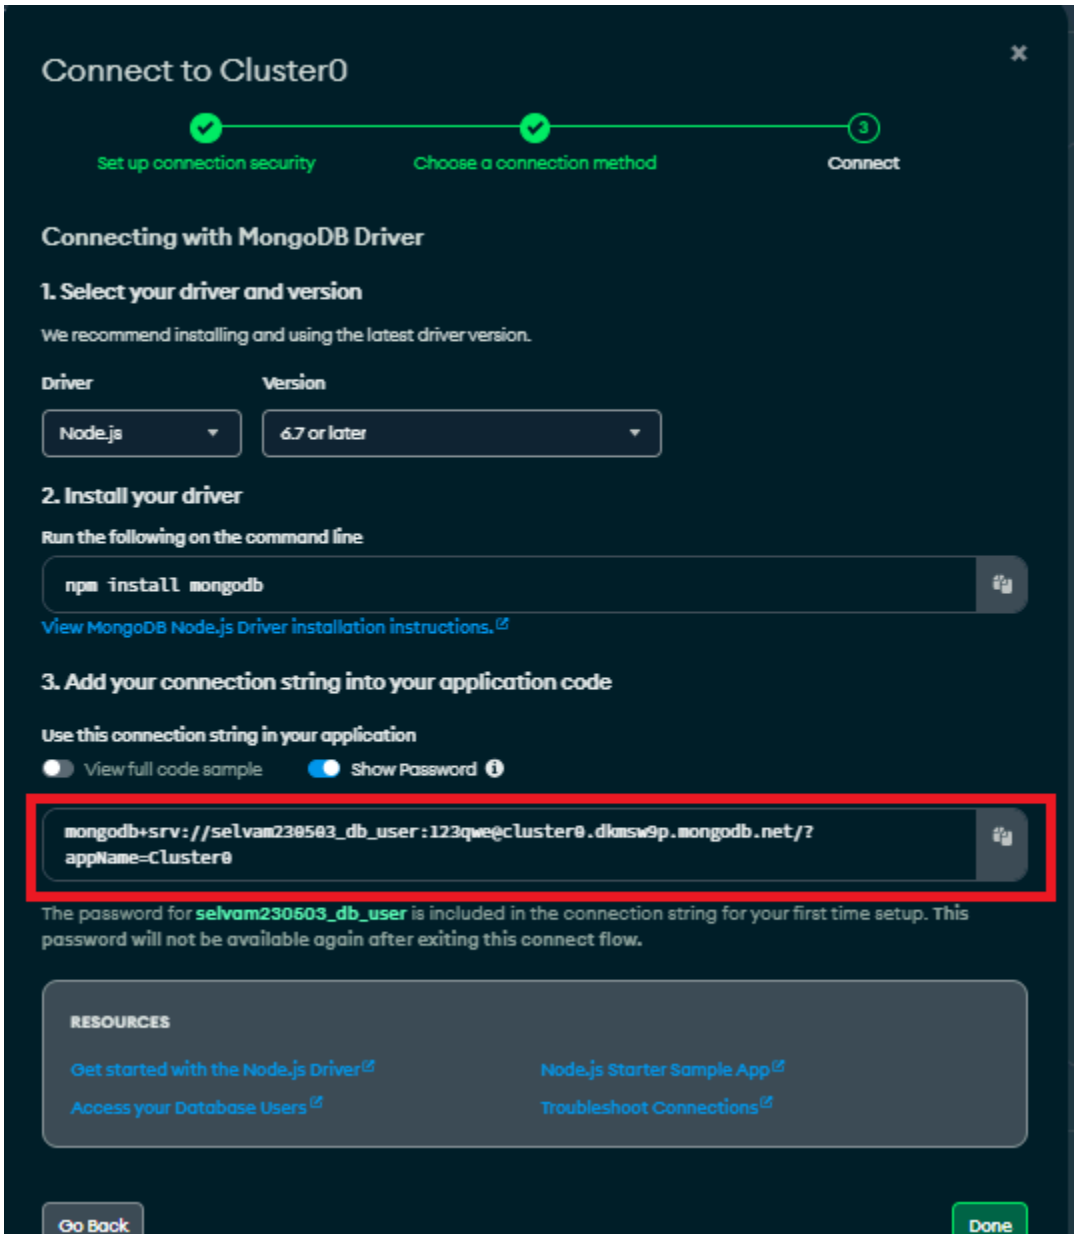


Select the Driver option in that :



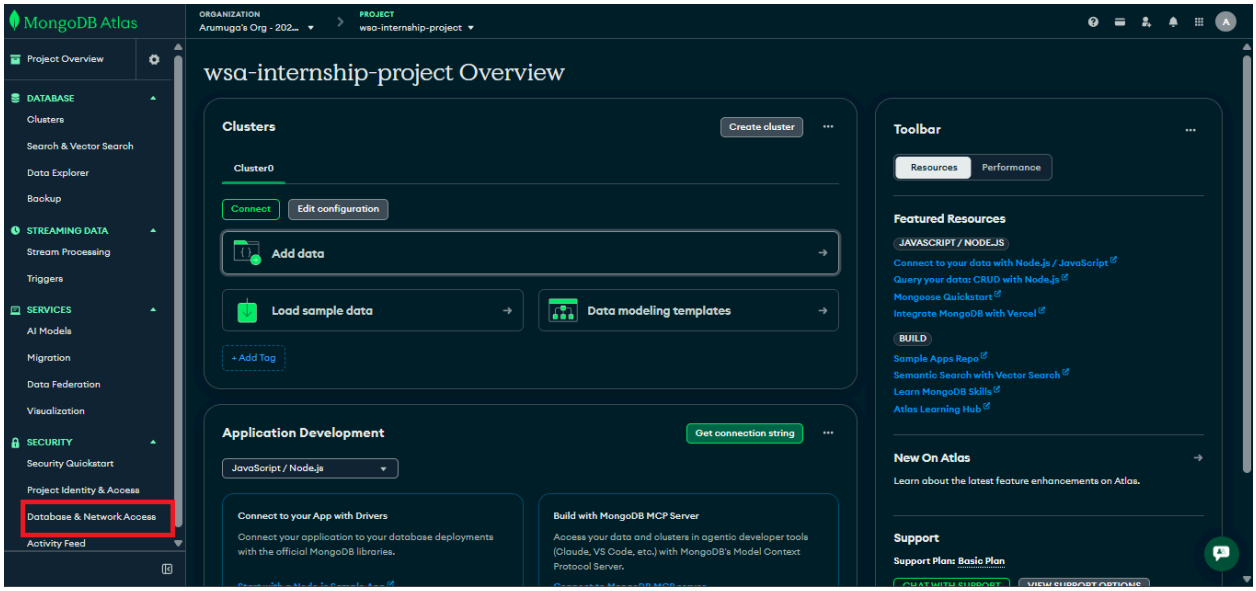
Copy the connection string :

Example :
mongodb+srv://dbUser:<password>@cluster0.mongodb.net/?retryWrites=true&w=majority

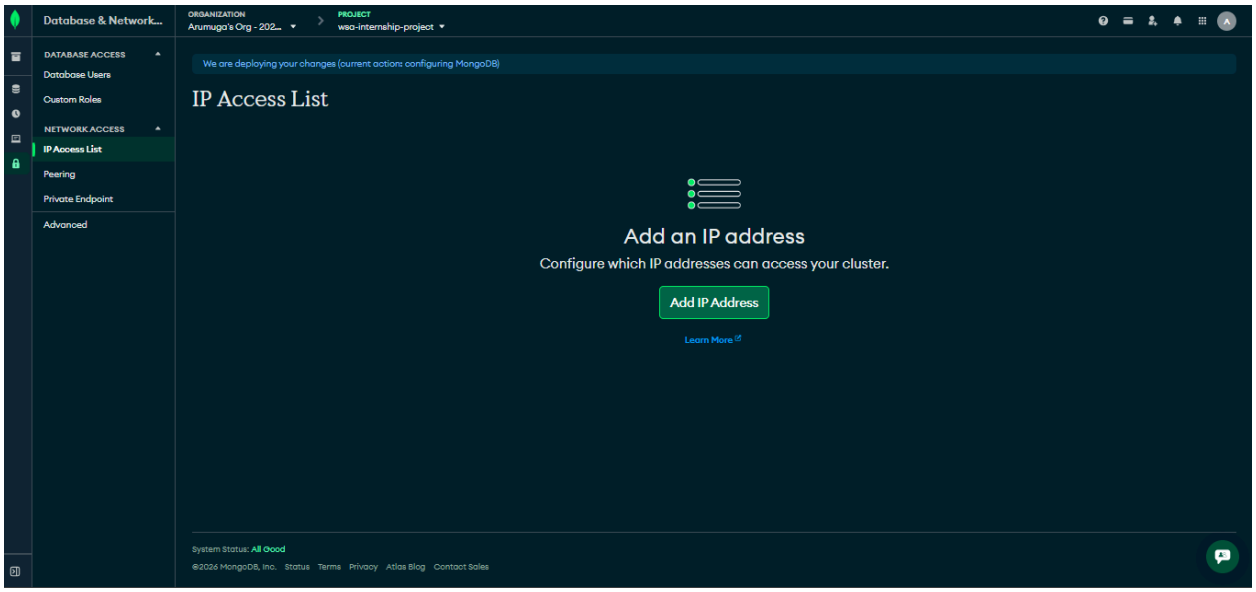


Step : 8 Update Network Access

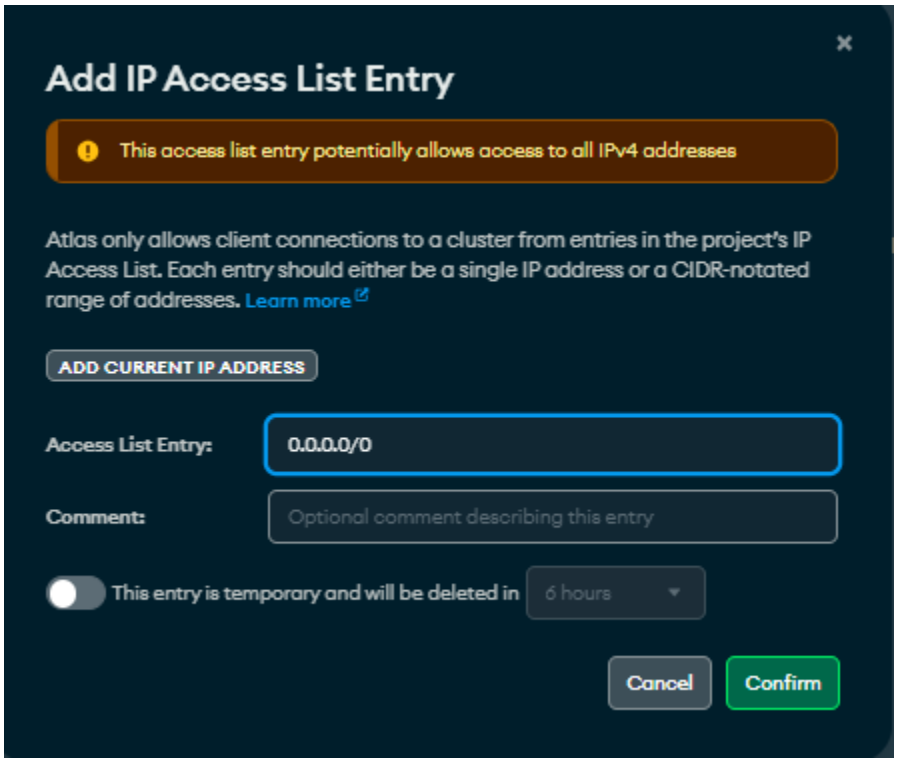
1. **Go to Network Access**



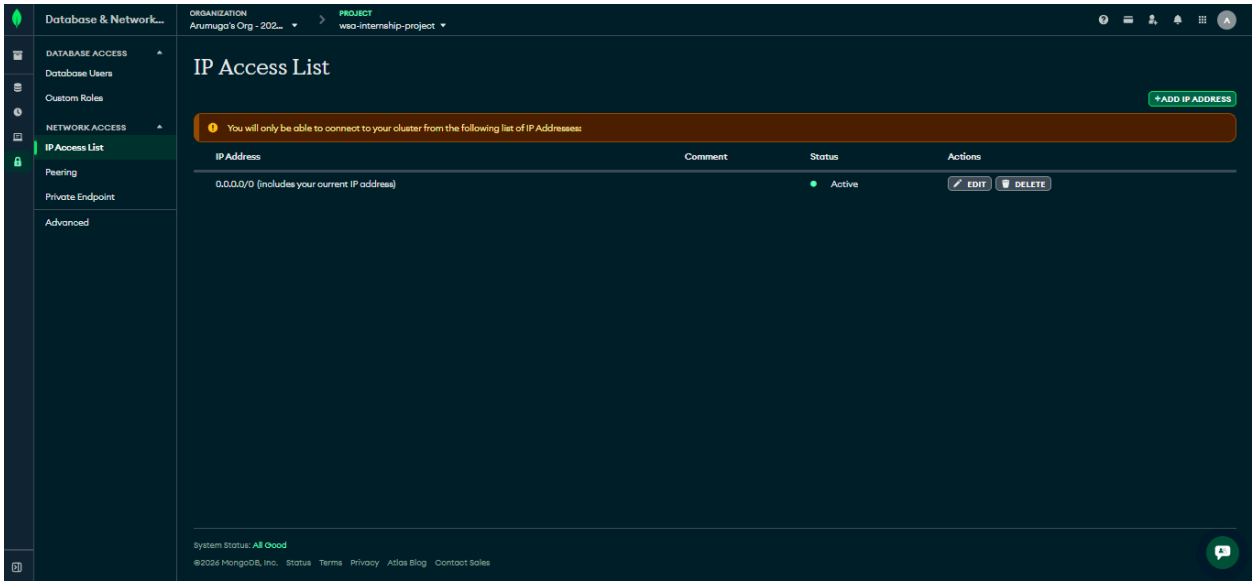
2. **Click IP Access List Address and click Add IP address (Suppose if there is any IP listed Go to point no 5).**



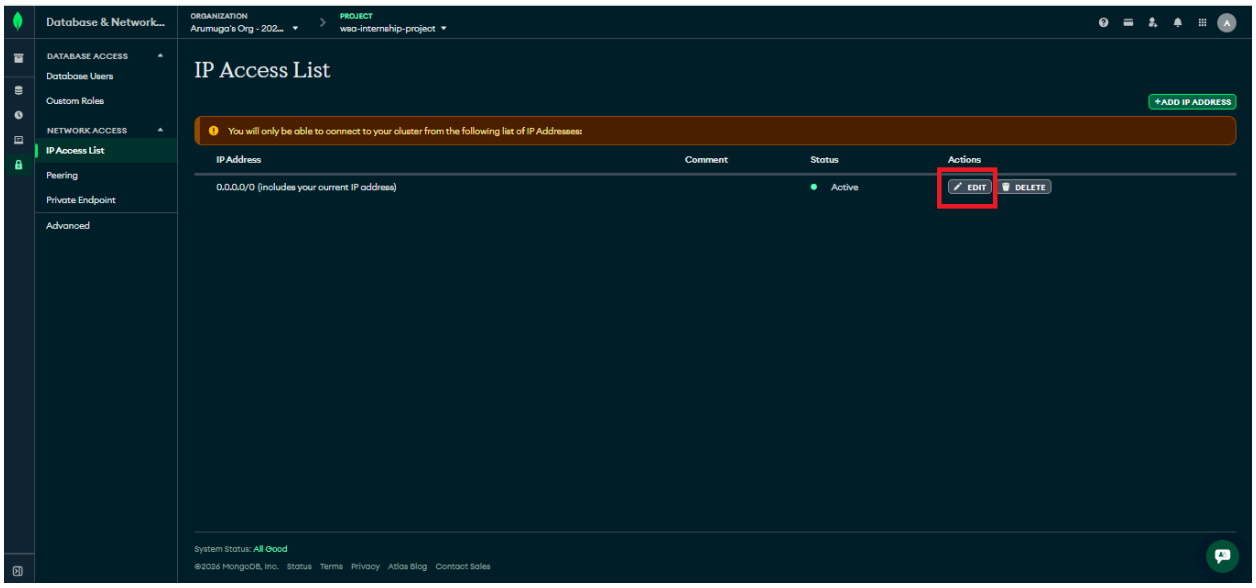
3. Select: Allow Access from Anywhere or Enter value as 0.0.0.0/0 and Click Confirm



4. Finally screen should like this :



5. (Optional) Click the Edit button and then follow the step no 3 and 4 at top.👆



⚠️ This allows your application to connect to the database.

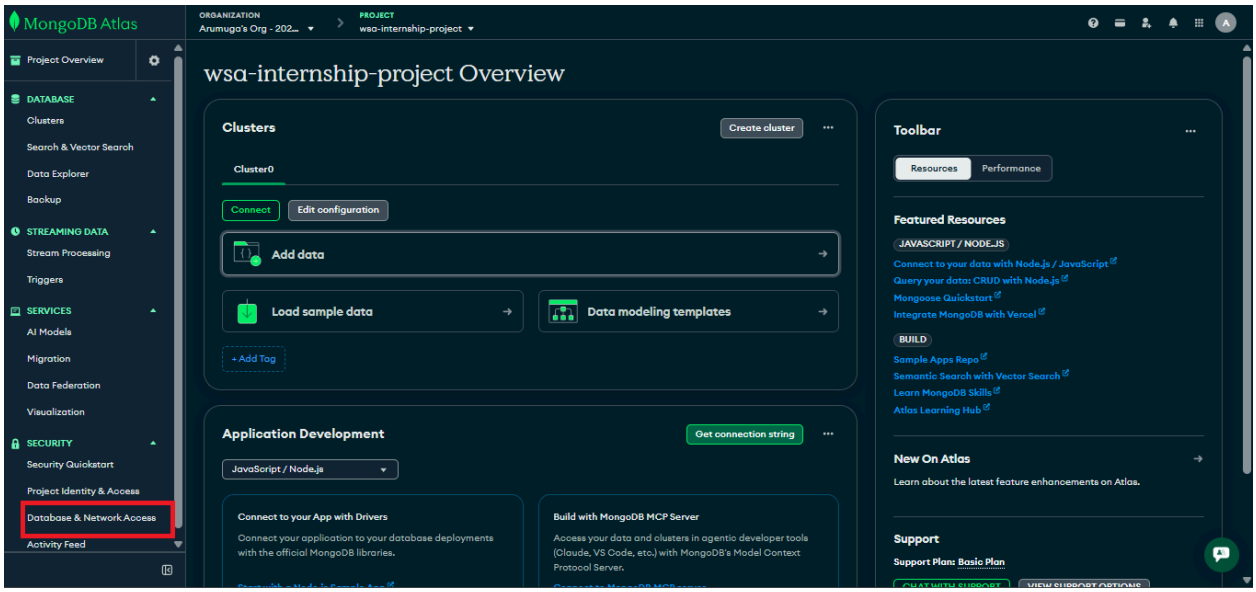
🎉 Setup Completed

"The connection string will be used in your Node.js backend project."

Steps to follow if you didn't get a popped window at step 6.👇

Step : 9 (Optional) Create Database User

1. **Go to Database Access**
2. **Click Add New Database User**



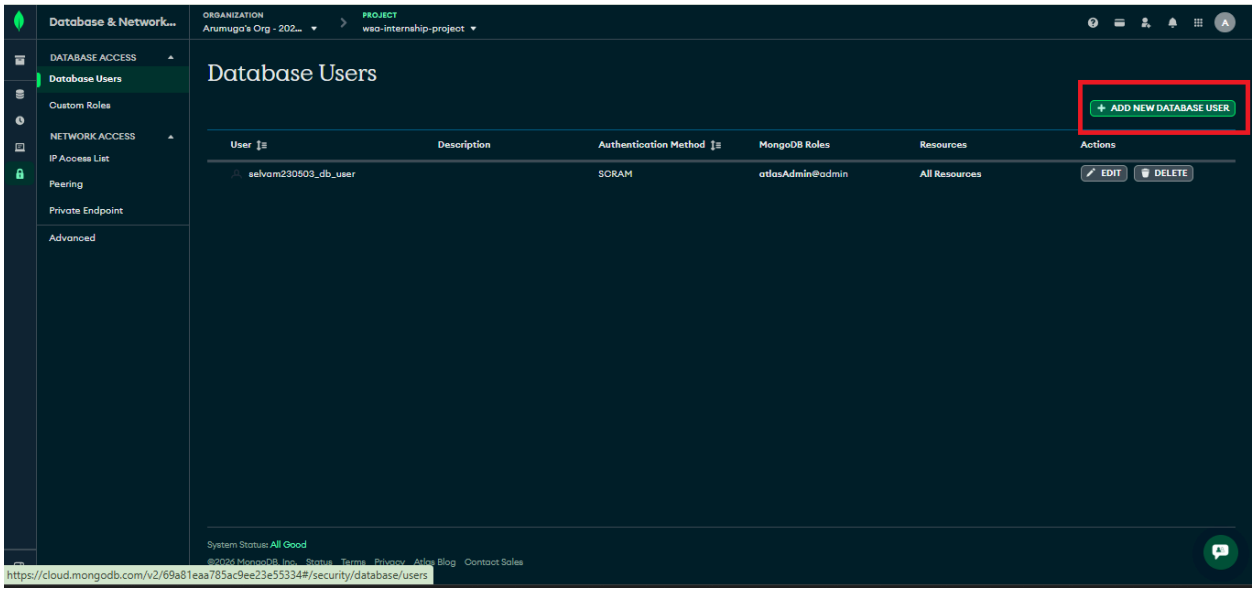
Enter:

Username : dbuser.

Password : Create a strong password.

Role: Read and Write to Any Database

👉 Click New DataBase Add User



Then Move to Step No : 7 at top.👆
